PROJECTS & EXTRACURRICULAR

Jobsco

[Link](#) | [GitHub](#)

- Developed a job application platform with separate pages for **recruiters and candidates**.
- Integrated **Clerk** for authentication, allowing users to log in via Google or GitHub.
- Implemented features like membership, activity tracking, and account management.
- Built using [Next.js](#), [Clerk](#), [Shadcn UI](#), [MongoDB](#), and [Supabase](#).

Activity

- Built a **dual-role platform** with dedicated pages for recruiters and candidates.

DALL-E

[Link](#) | [Github](#)

- Developed a tool that **generates images** based on user-inputted prompts.
- Users can write text prompts and generate images **relevant to the input**.
- Enabled a feature for users to share generated images with a community.
- Built using [React.js](#), [Node.js](#), [MongoDB](#), [Axios](#), [Fal-ai API](#), and [Cloudinary](#).

Activity

- Implemented an **image generation system powered by user prompts**.
- Successfully integrated **Fal-ai API** for AI-powered image generation.

Blenmaster

[Link](#) | [GitHub](#)

- Built a tool for generating random color palettes and gradients.
- Integrated a feature to automatically create color gradients.
- Enabled direct copy-paste functionality for linear gradient CSS code.
- Built using [React.js](#), [Node.js](#), [MongoDB](#), [Axios](#), [Fal-ai API](#), and [Cloudinary](#).

Activity

- Developed and deployed a web-based tool for designers to generate and customize color schemes.
